Package 'zeitgebr'

December 15, 2017

Title Analyse and Visualise Circadian Behaviours

Date 2017-09-06

Version 0.0.0.9000

Description Use behavioural variables to compute period, rhythmicity and other circadian parameters.

Depends R (>= 3.00),
behavr

Imports data.table,
lomb,
ggplot2

Suggests testthat,

R topics documented:

`dams_sample` *A behavr table with approximatly ten days of DAM2 recording for 32 fruit flies. The first 10, the following 11 and the last 11 animals have long, short and wild type period, respectively (see* `meta(dams_sample)`*). Raw data stored at https://github.com/rethomics/zeitgebr/tree/master/raw_data*

Description

A behavr table with approximatly ten days of DAM2 recording for 32 fruit flies. The first 10, the following 11 and the last 11 animals have long, short and wild type period, respectively (see `meta(dams_sample)`). Raw data stored at https://github.com/rethomics/zeitgebr/tree/master/raw_data

Usage

```
dams_sample
```

Format

An object of class `behavr` (inherits from `data.table`, `data.frame`) with 415040 rows and 3 columns.

Author(s)

Maite Ogueta

`periodogram` *Computes periodograms*

Description

This function builds peroidograms, with one of several methods, for each individual of behavr table

Usage

```
periodogram(var, data, period_range = c(hours(16), hours(32)),
  resample_rate = 1/mins(1), alpha = 0.05, FUN = chi_sq_periodogram, ...)
```

Arguments

`var`	variable to analyse
`data`	behavr table
`period_range`	vector of size 2 defining minimal and maximal range of period to study (in seconds)
`resample_rate`	frequency to resample (up or down) the data at (in hertz)

alpha	significance level
FUN	function used to compute periodogram (see periodogram_methods)
...	additional arguments to be passed to FUN

Value

a behavr table with the

Examples

```
data(dams_sample)
pdt <- periodogram(activity, dams_sample, FUN=ls_periodogram, oversampling = 4)
pdt <- periodogram(activity, dams_sample, FUN=chi_sq_periodogram)
```

---

periodogram_methods *Methods For Computing Periodograms*

Description

These functions provides a series of methods to assess periodicity of circadian processes.

Usage

```
ac_periodogram(x, period_range = c(hours(16), hours(32)),
  sampling_rate = 1/mins(1), alpha = 0.05)

chi_sq_periodogram(x, period_range = c(hours(16), hours(32)),
  sampling_rate = 1/mins(1), alpha = 0.05, time_resolution = hours(0.1))

fourier_periodogram(x, period_range = c(hours(16), hours(32)),
  sampling_rate = 1/mins(1), alpha = 0.05)

ls_periodogram(x, period_range = c(hours(16), hours(32)),
  sampling_rate = 1/mins(1), alpha = 0.05, oversampling = 8)
```

Arguments

x	numeric vector
period_range	vector of size 2 defining minimal and maximal range of period to study (in seconds)
sampling_rate	the – implicitly regular – sampling rate of x (in hertz)
alpha	significance level
time_resolution	the resolution of periods to scan
oversampling	the oversampling factor

Details

TODO

Value

a data.table with the columns:

- `period` – the period (in s)
- `power` – the power (or equivalent) for a given period
- `signif_threshold` – the significance threshold of the power (at alpha)
