Package 'zeitgebr'

May 11, 2018

Title Analysis of Circadian Behaviours

Date 2018-05-05

Version 0.0.0.9000

Description Computes period, rhythmicity and other circadian variables.

Depends R (>= 3.00),
>   behavr,
>   lomb,
>   pracma

Imports data.table

Suggests testthat,
>   covr,
>   knitr

dams_sample	*A behavr table with approximatly ten days of DAM2 recording for 32 fruit flies. The first 10, the following 11 and the last 11 animals have long, short and wild type period, respectively (see* meta(dams_sample)). *Raw data stored at https://github.com/rethomics/zeitgebr/tree/master/raw_data*

Description

A behavr table with approximatly ten days of DAM2 recording for 32 fruit flies. The first 10, the following 11 and the last 11 animals have long, short and wild type period, respectively (see meta(dams_sample)). Raw data stored at https://github.com/rethomics/zeitgebr/tree/master/raw_data

Usage

```
dams_sample
```

Format

An object of class behavr (inherits from data.table, data.frame) with 415040 rows and 3 columns.

Author(s)

Maite Ogueta

---

find_peaks	*Find peaks in a periodogram*

Description

Locate the peaks in a pregenerated periodogram. Detection is based on pracma::findpeaks. Only the significant (with threshold 'alpha') peaks are extracted.

Usage

```
find_peaks(data, n_peaks = 3)
```

Arguments

data	behavr::behavr table representing a periodogram, as returned by periodogram
n_peaks	maximal numbers of peak to be detected

Value

[behavr::behavr](#) table that is data with an extra column peak. peak is filled with zeros except for rows match a peak. In which case, they have an integer value corresponding to the rank of the peak (e.g. 1 for the first peak).

Examples

```
data(dams_sample)
per_dt_xs <- periodogram(activity, dams_sample, FUN=chi_sq_periodogram)
per_dt_xs_with_peaks <- find_peaks(per_dt_xs)
per_dt_xs_with_peaks[peak==1]
## Not run:
ggetho::ggperio(per_dt_xs_with_peaks) + geom_line()  +
geom_line(aes(y=signif_threshold), colour="blue") +
geom_point(data = per_dt_xs_with_peaks[peak==1], col="red") +
facet_wrap( ~ id, ncol = 8, labeller = id_labeller)

## End(Not run)
```

---

periodogram	*Computes periodograms*

Description

This function builds peroidograms, with one of several methods, for each individual of [behavr](#) table

Usage

```
periodogram(var, data, period_range = c(hours(16), hours(32)),
  resample_rate = 1/mins(15), alpha = 0.01, FUN = chi_sq_periodogram, ...)
```

Arguments

var	variable to analyse
data	[behavr](#) table
period_range	vector of size 2 defining minimal and maximal range of period to study (in seconds)
resample_rate	frequency to resample (up or down) the data at (in hertz)
alpha	significance level
FUN	function used to compute periodogram (see [periodogram_methods](#))
...	additional arguments to be passed to FUN

Value

a [behavr](#) table with TODO

Examples

```
data(dams_sample)
pdt <- periodogram(activity, dams_sample, FUN=ls_periodogram, oversampling = 4)
pdt <- periodogram(activity, dams_sample, FUN=chi_sq_periodogram)
```

---

periodogram_methods   *Methods For Computing Periodograms*

Description

These functions provides a series of methods to assess periodicity of circadian processes.

Usage

```
ac_periodogram(x, period_range = c(hours(16), hours(32)),
  sampling_rate = 1/mins(1), alpha = 0.05)

chi_sq_periodogram(x, period_range = c(hours(16), hours(32)),
  sampling_rate = 1/mins(1), alpha = 0.05, time_resolution = hours(0.1))

fourier_periodogram(x, period_range = c(hours(16), hours(32)),
  sampling_rate = 1/mins(1), alpha = 0.05)

ls_periodogram(x, period_range = c(hours(16), hours(32)),
  sampling_rate = 1/mins(1), alpha = 0.05, oversampling = 8)
```

Arguments

x	numeric vector
period_range	vector of size 2 defining minimal and maximal range of period to study (in seconds)
sampling_rate	the – implicitly regular – sampling rate of x (in hertz)
alpha	significance level
time_resolution	
	the resolution of periods to scan
oversampling	the oversampling factor

Value

a [data.table](#) with the columns:

- period – the period (in s)
- power – the power (or equivalent) for a given period
- p_value – the significance of the power
- signif_threshold – the significance threshold of the power (at alpha)
